

The Gharieni Group takes Detox treatments to the next level and introduces the MLX i3Dome – the triple detox therapy

Moers, Germany:

The Ultimate Detox Booster

The Gharieni Triple Detox Therapy „MLX i3Dome“ is the new generation of detox treatments. Combining Far Infrared technology with Plasma- and Light therapy, this specialty table offers 3 detox treatment methods in one.

Combining FIR-, Plasma- and Light therapies create a truly revolutionary treatment in the wellness category. The synergies greatly enhance and improve the already well known benefits of each therapy to create an ultra-effective treatment protocol that will astound and impress every single client who tries it.

Visible skin rejuvenation, increase of vitality and suppleness are just a few of the incredible results obtained already after a few applications. Continued use will significantly improve and maintain optimal skin health.

No therapist needed

The Gharieni MLX i3Dome concept works as a stand-alone therapy, where no therapists is needed. After the client is positioned on the MLX iDome and the PLT device, no hands are necessary to support the Gharieni MLX i3Dome detox therapy.

The Gharieni **FIR technology** in the MLX iDome effects the body with Far Infrared rays and stimulates the metabolism through the body's perspiration. Two versions of the MLX iDome are available. The electrically height adjustable "Electric" version and the non-adjustable "Static" version.

Plasma for problem skin, anti-aging and revitalization

During the application, clients are exposed to the energy of oxygen (O₂) in the form of applied electrically negatively charged ions. Based on findings of quantum physics, Plasma Therapy are the negative ions collected from the ambient air and then directed into the specially coated PLT device where it combines with Light therapy. Ions penetrate through the skin to stimulate cell metabolism while there is simultaneous inhalation through mouth and nose thereby providing positive benefits for the whole body including organs and muscles.

Benefits include:

- Visible skin rejuvenation already after a few applications
- Maintenance of skin health
- Visible improvement of problem skin
- Increase of vitality & suppleness
- Positive support of the metabolism in the entire organism

Light therapy: scientifically proven and effective

Light treatment has been known for a long time and has been successfully used in treatments for decades. The effect of the colored light is reinforced by the negative ions. The Gharieni PLT device offers red, green and blue light therapy.

The MLX i3Dome will be unveiled at Beauty Dusseldorf, 6th of March 2020.

ABOUT THE GHARIENI GROUP

The Gharieni Group, based in Germany, is a leading European manufacturer of high end spa and medical equipment and furniture with almost 30 years of experience.
